

INMAGE CO-FOUNDER KUMAR MALAVALLI TO GIVE WELCOMING SPEECH AT THE DATA PROTECTION SUMMIT

Santa Clara, Calif. – March 5, 2007 – InMage Systems, Inc., the leading provider of business continuity and disaster recovery software, today announced that Kumar Malavalli, co-founder, chairman of the board and chief strategy officer of InMage Systems, has been selected as the general chairperson for the Data Protection Summit. He will be addressing the audience on March 14, at 10 a.m. PST, at the Data Protection Summit, held at the Hilton Irvine/Orange County Airport in Irvine, California.

“The ideal data protection solution has to support the explosive data growth of today’s heterogeneous IT departments and meet strict user demands such as regulatory compliance, continuous backup, application failover and remote replication. At the same time, it has to take in consideration the ease of implementation and management at the lowest cost,” said Kumar Malavalli. “I am pleased to meet the Data Protection Summit audience, whose presence at this conference proves that customers are now ready to make an educated purchase decision and find the best solution to protect their mission-critical information in case of a disaster.”

The Data Protection Summit is the place to learn how to keep data safe and secure, protect information assets, avoid data breaches, and achieve regulatory compliance. The program deals with the handling of data throughout its lifetime from entry through archiving or destruction. Industry leaders show how to protect data effectively, considering such factors as cost, business value, restoration time and effort, and use of computing resources. Attendees will be able to ask questions, see the latest products, meet key people, and participate in important discussions. For more information, visit www.dataprotectionsummit.com.

About InMage Systems, Inc.

InMage Systems, Inc. redefines the traditional enterprise data protection by addressing the needs of today's complex, heterogeneous IT environments and protecting the integrity

of their mission-critical backup, recovery and replication operations. The company's mission is to ensure that business-critical data is always available, locally, globally and remotely, in a cost-effective, scalable and non-disruptive manner. The company's flagship product is an all-in-one disaster recovery, data migration and application failover solution based on the CDP technology and built for applications such as Exchange, Oracle and SQL.
