StorageCraft Announces ShadowProtect IT Edition 3.0

Disk-based backup technology includes hardware independent restore (HIR), migration features to and from virtual environments

DRAPER, Utah, U.S.A. – March 13, 2007 – StorageCraft Technology Corporation, a provider of innovative disk-based backup, disaster recovery, data protection, migration and security solutions for servers, desktops and laptops, today announced the upcoming release of the latest version of its ShadowProtect™ line of disk-based backup and disaster recovery software, StorageCraft ShadowProtect IT Edition™ 3.0.

ShadowProtect IT Edition 3.0 includes features which allow hardware-independent restoration following a catastrophic data loss or hardware failure of a Windows server, desktop or laptop. This allows IT professionals to create a live or cold state backup image and restore it to a completely different system.

“The addition of HIR allows us to restore to any environment, either virtual or physical,” said Ken Edwards of Maverick Mesa Computer Specialties. “With ShadowProtect IT Edition 3.0, we are able to get our customers up and running in less than an hour.”

With ShadowProtect IT Edition 3.0, IT professionals are also able to restore a backup image to virtual environments, which can be the fastest method of restoring a system in the event of a catastrophic failure. Recovery to a virtual environment may also save money by avoiding costly downtime.

ShadowProtect IT Edition 3.0 allows administrators to backup, restore or migrate to new systems with flexibility – whether they are going from a physical machine to another physical machine (P2P), a physical to a virtual machine (P2V), or even a virtual machine to a physical machine (V2P).

“This means there are no limitations on the types of Windows hardware you are backing up or migrating to,” said Scott Barnes, chief technology officer of StorageCraft. “We’ve designed ShadowProtect IT Edition 3.0 to help IT professionals protect every system in their computing environment.”

Improved Recovery of Servers, Desktops and Laptops

ShadowProtect IT Edition 3.0 also makes it easier to recover servers, desktops and laptops from a catastrophic failure. New features include tools to help IT professionals get their systems up and running in minutes from the StorageCraft Recovery Environment.

ShadowProtect IT Edition 3.0 has an improved recovery environment which includes thousands of additional drivers to make it easy to recover systems and data. In addition, ShadowProtect IT Edition 3.0 allows IT professionals to dynamically load drivers to provide complete flexibility in adding new storage controller drivers or NIC drivers, for example.

“When our customers need to restore a server, desktop or laptop from bare metal, the last thing they want to do is spend hours trying to add new drivers to make sure their systems are loading properly,” said Brandon Nordquist, vice president of product management. “The improved recovery environment in ShadowProtect IT Edition 3.0 means customers now have automatic hardware coverage, which makes it easy to restore systems quickly and with limited intervention.”

Additional Features in ShadowProtect IT Edition 3.0

Other features in ShadowProtect IT Edition 3.0 include:

- Bare metal recovery of servers, desktops and laptops in minutes;
- Ability to take online or cold state backup images without the need to install software;
- Simple view to quickly recover files and folders or update backup images;
- Network Configurator to manage domains, mapped drives and network resources;
- Bootable recovery CD based on Windows Vista; includes automatic hardware detection.

Pricing and Availability

ShadowProtect IT Edition 3.0 will be available in mid-April, through the StorageCraft Web site and through authorized StorageCraft distributors, managed service providers (MSPs) and value-added resellers (VARs). Volume discounts are available.
